

DERMA

greenTECHNOLOGY

enoplastic

SMART AND GREEN.

DERMA is born from Enoplastic experience and manufacturing excellence.

DERMA is a brand new material obtained through a revolutionary and proprietary production system.

The goal was to produce an environmentally-friendly, efficient alternative to traditional poly laminate but having superior technical features and benefits for the final Customer.

A new production technology

through which we generate

- a material with steadier technical features over time
- less waste and cleaner production lines.

Reduced carbon footprint

DERMA is environmentally friendly: the materials used during the production process allow the reduction of gCO_2eq by 11.56% per capsule produced*.

Easy application

thanks to material's inner properties, **DERMA** capsules:

- have a reduced elastic memory
- provide greater adhesion to the neck of the bottle.

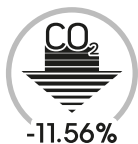

A material thickness for each product vision

DERMA is available in 3 different thicknesses:

Derma 65 - for a hi-tech, minimalist aesthetics

Derma 75 - when you need a traditional image

Derma 100 - for any classy, contemporary product.
